WebVisia Bars

About the Game

The rules of the game are pretty easy. Bars appear on the screen. Each of them is placed at random and overlaps the ones that are below it. The goal of the game is to remove the bars one by one by tapping onto them. Beware though that you can only remove the bar, which is on the very top – if it overlaps with another bar, it will never disappear. Periodically new bars will appear on the screen. Therefore you have to be quite fast in making up your mind which bars to remove.

In One Word

Choose a bar that lies "free" and tap on it. If the bar is free indeed, it will disappear from the screen. Now you can proceed to the next bar, and the next, etc. Do this as fast as you can because periodically new bars will appear on the screen – after all you are playing for time…

Settings

WebVisia Bars allows customizing the setting of the level of difficulty. There are 12 levels, the last few being meant for well-advanced players. Other customized settings will enable you to turn on and off the sound effect while moving a bar, as well as the different type of bars (shade, color, etc.). You can also activate an option that shuffles the bars at a certain interval.

Scoring

Points are scored according to the level of the game and the time it was completed for. The faster you pass on to the next level, the better your score will be!

Registration

This program comes in 2 main versions – registered and unregistered. The difference between them is the following: if your version is unregistered you can only play levels 1, 2, 3 and 4. If you decide to buy the program and pay for it, you will receive a registration code. Enter this code in the respective window, your program will be automatically registered and the above restrictions will disappear. Now you can enjoy your game at all programmed levels.

How to Register?

From the help menu select "register". A window will appear with a serial and a registration numbers. Send us the serial number. Upon receipt of your payment we will forward you the registration number. Enter this number in the above mentioned window and your program will acquire all the features of the registered mode.

Help

This program also contains some simplified help topics. You can find there basic information of the rules of the game and its goal.
